Data and computational challenges

The problem:
- Data management for finance research is hard.
- And now, the intra-day dimension
- Any one scholar, working alone, finds it daunting.

The response:
- Setup a data centre
- With staff focused on computer technology
- Organise intra-day data carefully
- Build tools and libraries for using this
- A research group where many tools are shared.

Bottom line: Pay fixed cost, but then the marginal cost of exploration should go down.

Looked at the U-shaped curve of intra-day volatility
An example of an application: Intra-day volatility

Realised Volatility (%)

10:30 11:30 12:30 13:30 14:30 15:30

Nifty

Susan Thomas
New developments in finance @ IGIDR
An example of an application: Intra-day volatility

- Looked at the U-shaped curve of intra-day volatility
- Evidence shows the early price discovery is not rapid.
- **Tested and estimated** structural breaks in intra-day volatility to identify when the early price discovery is finished.
An example of an application: Intra-day volatility

1-minute Volatility for Nifty on 06/10/2008

Realised Volatility

- $\mu = 0.12$
- $\mu = 0.06$
- $\mu = 0.07$

Susan Thomas
New developments in finance @ IGIDR
• Looked at the U-shaped curve of intra-day volatility
• Evidence shows the early price discovery is not rapid.
• Tested and estimated structural breaks in intra-day volatility to identify when the early price discovery is finished.

Policy proposal: call auction in the morning (policy paper of June 2010)

Mid-July 2010, SEBI proposed call auctions for the opening for the Nifty stocks. Equity markets started market open using call auctions from 18th October.
Where we are

- We began in May 2010.
- 24 cores, 64G RAM, 14T of storage
- Flow of data from NSE has begun
- Software tools for handling this data are coming together
- A series of research projects are underway:
  1. Liquidity forecasting
  2. Microstructure considerations in constructing VIX
  3. Information share
  4. Financial conditions index, securities markets ‘report card’
  5. Measuring macro-liquidity and its consequences
  6. Funding constraints, difficulties of arbitrage
  7. Improved risk measurement in clearing
- Outputs: Academic papers, policy papers, ‘technical notes’
- Full-time staff: 3 researchers, 5 Ph.D. students, 1 database administrator
Get involved

We welcome:

- Collaborative research projects
- Visitors
- Short-term appointments
- Long-term appointments
- Participation in our conferences and policy round-tables.
